

Day1-Q2-DotNetFundamentals-2026-07-21

1. Which component is common to all .NET applications?

- A. IIS
- B. CLR
- C. SQL Server
- D. Windows Registry

Answer: B

2. .NET Core is best described as:

- A. Windows-only framework
- B. Cross-platform framework
- C. UI-only framework
- D. Database framework

Answer: B

3. Which language is NOT supported by .NET?

- A. C#
- B. VB.NET
- C. F#
- D. Python

Answer: D

4. .NET applications are compiled into:

- A. Machine Code
- B. Native Code
- C. IL Code
- D. Byte Code

Answer: C

5. Which service is provided by CLR?

- A. Garbage Collection
- B. Security
- C. Exception Handling
- D. All of the above

Answer: D

6. CTS ensures:

- A. Database consistency
- B. Language interoperability
- C. UI consistency
- D. Hardware compatibility

Answer: B

7. CLS ensures that:

- A. Code runs faster
- B. Code is memory efficient
- C. Code can be used across .NET languages
- D. Code is secure

Answer: C

8. What is Garbage Collection?

- A. Removing unused files
- B. Managing unused memory
- C. Deleting temp files

D. Clearing cache

Answer: B

9. Which memory does GC manage?

A. Stack only

B. Heap only

C. Both stack and heap

D. CPU registers

Answer: B

10. JIT compilation happens:

A. At compile time

B. At design time

C. At runtime

D. Before installation

Answer: C

11. Which object is eligible for GC?

A. Referenced object

B. Unreferenced object

C. Static object

D. Global object

Answer: B

12. Managed code is executed under:

A. OS

B. CLR

C. Hardware

D. BIOS

Answer: B

13. Managed code benefits include:

A. Automatic memory management

B. Security

C. Type safety

D. All of the above

Answer: D

14. Class Library project produces:

A. .exe

B. .dll

C. .msi

D. .json

Answer: B

15. Class libraries help in:

A. Code reuse

B. Maintainability

C. Separation of concerns

D. All of the above

Answer: D

16. Which statement is mandatory for a Console application to execute?

```
class Program
{
```

```
// Missing code
}  
A. Constructor  
B. Start() method  
C. Main() method  
D. Run() method
```

Answer: C

17. What happens to this object?

```
object obj = new object();  
obj = null;  
A. Immediately destroyed  
B. Memory leak  
C. Eligible for GC  
D. Stack cleared
```

Answer: C

18. Considering Console Application Entry Point Fill in the missing keyword to make this program executable.

```
class Program  
{  
    _____ void Main()  
    {  
        Console.WriteLine("Hello .NET");  
    }  
}
```

- A. public
- B. static
- C. virtual
- D. sealed

Answer: B

19. Fill in the missing namespace considering code below:

```
using _____;  
class Program  
{  
    static void Main()  
    {  
        Console.WriteLine("Test");  
    }  
}
```

- A. System.IO
- B. System.Console
- C. System
- D. Microsoft

Answer: C

20. Fill in the blank so the object becomes eligible for GC.

```
object obj = new object();
```

```
obj = _____;
```

A. empty

B. dispose

C. null

D. delete

Answer: C
