Day 18 – Assignment ASP.NET Core Web APIs Security with JWT

Create a proper ASP.NET Core Controller based Web API application to work with JWT Authentication. Authentication-Authorization rules to be followed:

We will have three roles: Admin, Manager and User for which Example permissions could be as:

Operation	Admin	Manager	User
Get all products	✓	✓	✗
Get product	✓	✓	Own record
Create product	✓	✓	✗
Update product	✓	✓	Own record
Delete product	✓	✗	✗
Register user	✓	✗	✗
Forgot password	✓	✓	✓
Reset password	✓	✓	✓

Use SQL Server Local DB for Database.

Registration → Login → JWT → Role Authorization → Product CRUD →
Forgot Password → Reset Password

Project structure should follow

Controller → Service → Repository → EF Core → SQL Server

🔒📄🔐 Strong Auth Today, Safe Systems Tomorrow 📄🔐
